Domus 3D
Version Pegasus

Layout design

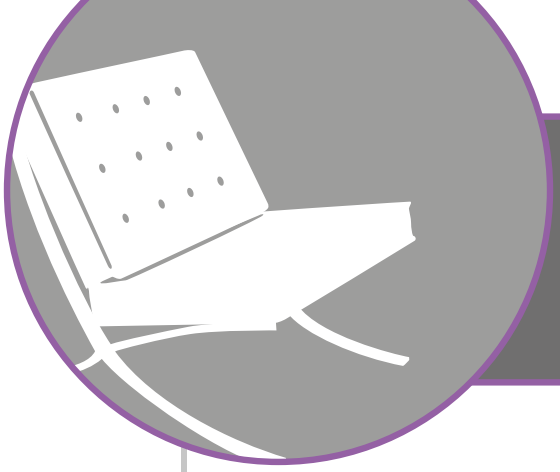
Layout design (single and multi-room) is quick and simple

2D Cad module helps you while managing more complicated shapes: you have all tools in order to draw what you need (arches, splines, polylines, ...)

Importation from external files (DXF format)

Walls advanced features: width, niches, holes, sloping ceilings…

Available (and customisable) **room templates** help you creating a project with one click



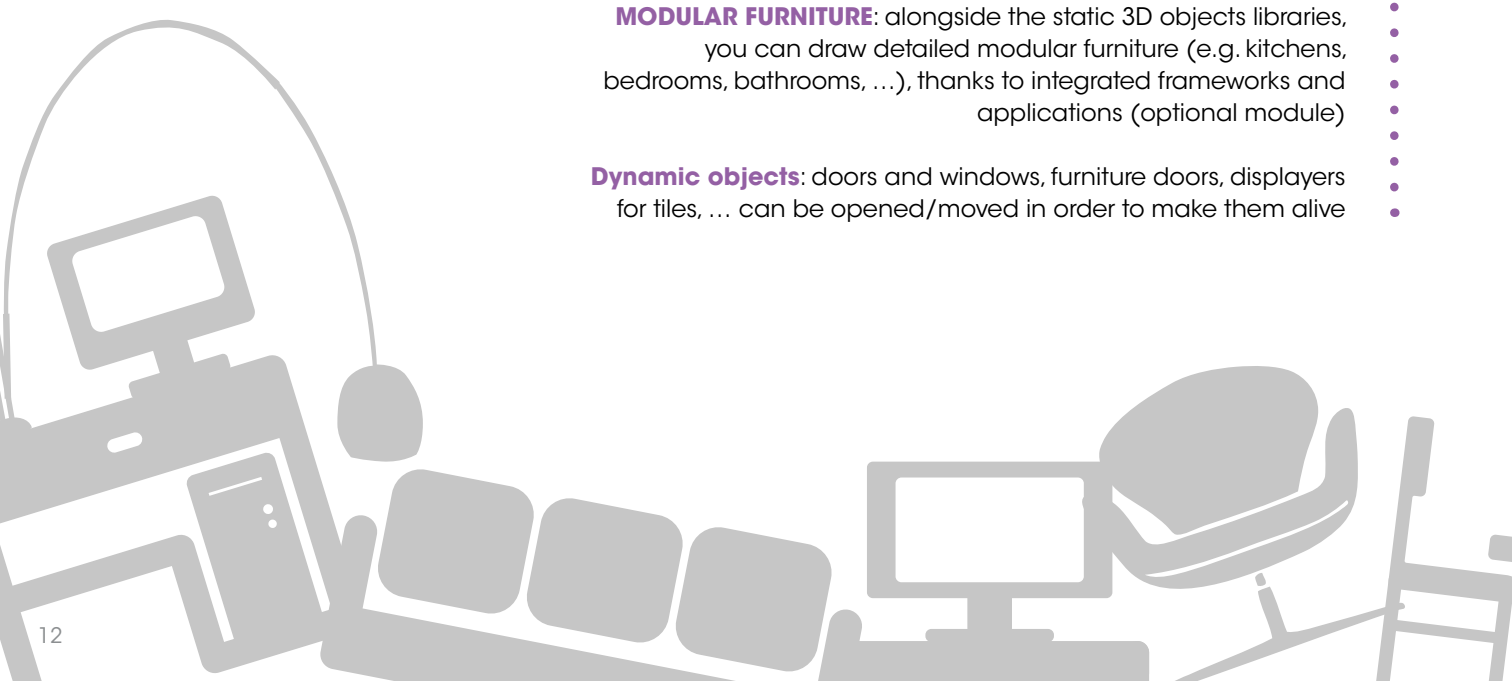
Modular **furnishing** elements and **accessories**

The 3D objects library contains many thousands of items; you can download them from the DomuS3D® Cloud. Catalogues Department continuously work in order to keep them up-to-date

DomuS3D® is OPEN: it is possible to create your own tiles and 3D objects collections and catalogues

MODULAR FURNITURE: alongside the static 3D objects libraries, you can draw detailed modular furniture (e.g. kitchens, bedrooms, bathrooms, …), thanks to integrated frameworks and applications (optional module)

Dynamic objects: doors and windows, furniture doors, displayers for tiles, … can be opened/moved in order to make them alive



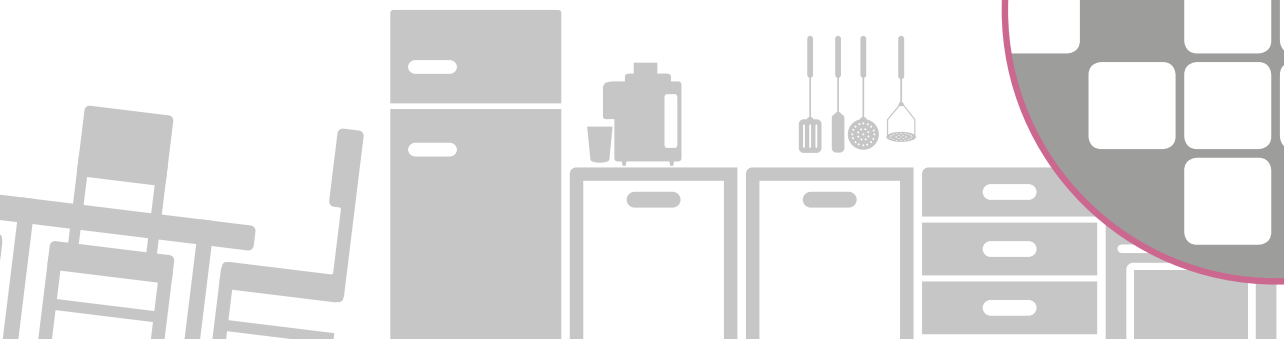
Tile **layout** and **patterns**

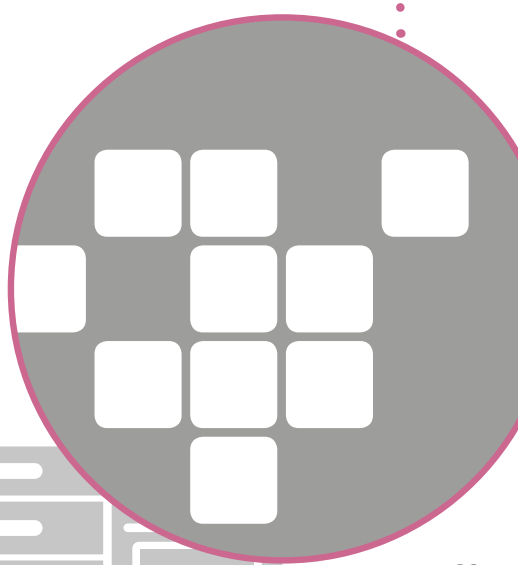
Thanks to dedicated features (e.g., vertical laying, frames, shower box corners, inner areas, countertops and steps..) you can **create any solution you need, no matter if it is a quick&simple or a detailed one**

You can be faster and more efficient by dragging and dropping tiles while in **3D**, **keeping concentrated on the architecture and look&feel of the project**

More than **300 laying schemes** (patterns) are available with installation, and new ones can be downloaded from the Cloud. They will allow you to create multi-format patterns with just a few clicks

Dynamic grout and patterns alignment allow you to decide where to start tiling (hence, how to cut tiles)





Project estimate and blueprints

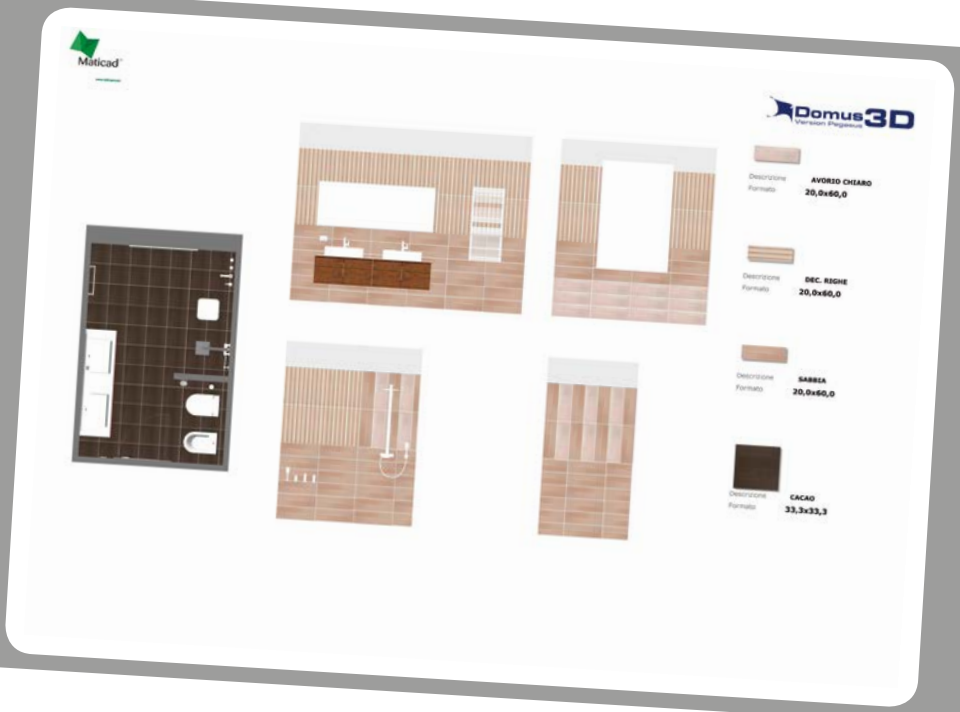
Anywhere in the project you can **print detailed technical** printouts for floor and walls

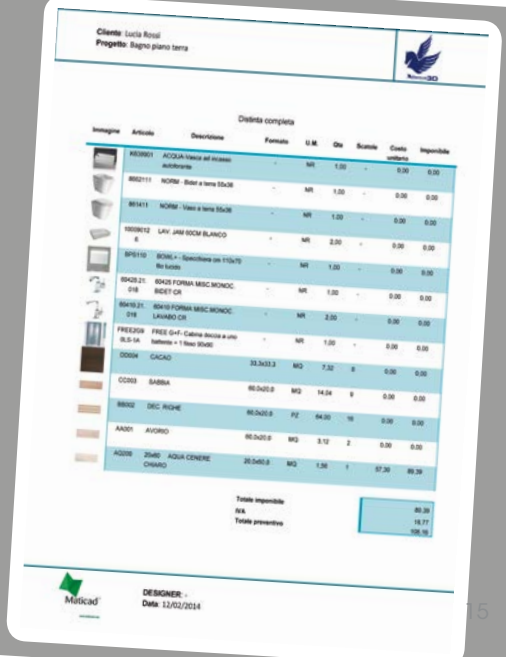
Technical blueprint for the installer module allows you to automatically generate a complete brochure with all needed information for a detailed installation

Project estimate can be formatted and printed using several (customisable) templates; for covering materials you can specify their waste factor

Summary brochure: when project is complete, you can automatically print a document containing all information about it. You can save it in .docx format, so that you can open and modify it even later on, by using Microsoft™ Word (not included with DomuS3D®)

Attachments: together with the project you can save any document related to the customer (email, PDF, images, Excel spreadsheets, etc…)





Professional **rendering** and **virtual reality**

The best result if considering project images can be achieved through the rendering of the scene. **The final effect** you will get is really emotional and absolutely realistic

DomuS3D® gives you the power of the world leading rendering engines (**V-Ray and mental ray®**), made easy for the daily use thanks to sophisticated interfaces, so that anyone can achieve stunning images

You can create static or **Stereoscopic** rendered images (Stereoscopic needs **3D glasses**)

360° Panoramas of the room can be seen on your PC, **published on your web site** or shared with tablets and smartphones

Share projects on **tablets**

Using the latest smartphones and tablets it is possible to share projects, 360° Panoramas, movies and rendered images so that you **can have all details of the project with you, anytime and everywhere**

360° Panoramas **can be shared on iOS and Android smartphones and tablets** thanks to a dedicated, free App: DomuS3D.Box

TouchFly (optional module) **allows you to customize and integrate DomuS3D® catalogue** with additional documents, pricelists, images, … **It is possible to synchronize the library with your iPAD**, so that you can have your catalogues with you, everywhere

Experience for your **business**

MATICAD GRANTS **MORE THAN 20 YEARS EXPERIENCE** IN **CREATING SOFTWARE** TOOLS FOR THE **INTERIOR DESIGN MARKET**
